## PROFESSIONAL SUMMARY

Full Stack Developer specializing in **Applied AI** and backend architecture, with a strong foundation in **TypeScript, JavaScript, and Python**. Experienced in designing scalable microservices and implementing **RAG pipelines** to create intelligent, data-driven applications. Proven track record of delivering high-quality digital products, from custom-coded modular systems in **NestJS** to rapid deployments using **no-code platforms** for prototyping and MVPs. Passionate about clean code (DRY), collaborative problem-solving in agile teams, and bridging the gap between complex AI logic and intuitive user experiences

## EXPERIENCE

### Full Stack Developer (Contractor) — Armadillo Security | February 2026 – Present

- **UI/UX Platform Transformation:** Leading the end-to-end redesign of a complex incident simulation platform using **React** and **Tailwind CSS** to ensure high-stress data clarity and modern visual standards.
- **Hybrid Development & Custom Styling:** Implementing highly customized interfaces by integrating specialized development platforms with **Advanced Custom CSS**, achieving a minimalist and responsive design that exceeds standard templates.
- **Interface Logic & Components:** Developing reusable **React components** and custom logic to translate complex system requirements into intuitive dashboards and real-time data visualizations.
- **Performance Optimization:** Ensuring "cognitive clarity" in UI layouts, allowing users to monitor simulation outcomes and security metrics at a glance through optimized front-end architecture.
- **Agile Technical Integration:** Collaborating with the engineering team to bridge the gap between custom front-end views and existing backend functionalities.
- 

### Development Internship – Borderit | 01/2026 – 02/2026

- **Early-Stage Product Development:** Contributed to the architectural design and feature implementation of a digital product from its initial development phases.
- **Full-Stack Implementation:** Developed responsive user interfaces and robust application logic using **PHP, JavaScript, HTML, and CSS**.
- **Technical Problem Solving:** Participated in deep technical analysis and troubleshooting to ensure platform stability and performance.
- **Agile Collaboration:** Worked within a high-performance development environment, focusing on seamless teamwork and efficient delivery.

### Teaching Assistant – Henry Bootcamp | 08/2025 – 11/2025

- **Technical Mentorship:** Provided hands-on guidance to groups of ~10 students, fostering their growth in full-stack development best practices.
- **Backend & API Support:** Assisted in the debugging of complex **REST APIs**, backend business logic, and integrated frontend-backend data flows.

- **Code Quality & Review:** Led pair-programming sessions and conducted rigorous project reviews to reinforce the adoption of clean architecture and industry standards.

## PROJECTS

### AI/RAG Microservice & Travel-Log Integration

- **Personalized AI Recommendation Engine:** Developed a Python-based microservice implementing a **RAG (Retrieval-Augmented Generation) pipeline** to provide hyper-personalized travel suggestions based on individual user history and preferences.
- **Vector Data Management:** Architected a contextual retrieval system using **OpenAI API embeddings** and **Chroma DB** (Vector Store) to efficiently query and process user-specific travel logs and documentation.
- **Microservices Architecture:** Engineered a high-performance **FastAPI** backend to serve intelligent responses, seamlessly integrated with the main Travel-Log platform via REST APIs.
- **Scalable Knowledge Retrieval:** Designed the pipeline to reduce model hallucinations by grounding AI interactions in the user's private travel data, ensuring accurate and relevant trip planning.

### Travel-Log – Personal Travel Management Platform (In Development)

- **Modular Full-Stack Architecture:** Designing a comprehensive platform for managing trips, cities, and travel documentation using a modular backend architecture in **NestJS**.
- **AI-Driven Personalization:** Integrating a custom **Python RAG microservice** to provide intelligent, data-driven travel recommendations based on user-specific history and preferences.
- **Scalable Data Modeling:** Implementing a relational database schema with **PostgreSQL** and **TypeORM** to manage complex entities like trip itineraries and user-generated travel logs.
- **Secure Ecosystem:** Developing a robust authentication flow utilizing **JWT** and **Google OAuth** to ensure private and secure access to user data.
- **Modern Frontend Experience:** Crafting a responsive and intuitive user interface with **Next.js** and **TypeScript**, focused on seamless navigation between exploration and documentation features.

### FixPoint – Services Marketplace

- **End-to-End Product Delivery:** Built a full-stack marketplace connecting home-service professionals with clients, featuring complex booking logic and secure authentication.
- **Robust Backend Architecture:** Implemented a modular system using **NestJS** and **PostgreSQL** with **TypeORM**, ensuring "DRY" code principles and scalable data management.
- **Secure User Ecosystem:** Integrated **Google OAuth**, **JWT**, and **Role-Based Access Control (RBAC)** to manage professional profiles and private user data securely.

## EDUCATION

Full-Stack Developer — Henry Bootcamp, 2025

Ingeniería Aeroespacial — Universidad de La Plata, 2019–2021

## TECH SKILLS

- **AI & Data Engineering:** RAG (Retrieval-Augmented Generation) pipelines , OpenAI API integration , Vector Stores (Chroma) , Embeddings , and Data Modeling.
- **Backend Development:** NestJS , Node.js , Python (Django) , Java , PHP , RESTful APIs , Microservices Architecture , and MVC.
- **Frontend & Design:** TypeScript , JavaScript (ES6+) , React , Next.js , HTML5/CSS3 , Responsive Design, and UI/UX Optimization.
- **Automation & Prototyping:** Rapid prototyping using No-Code platforms, Custom CSS styling, and Workflow Automation.
- **Databases & Tools:** PostgreSQL , TypeORM , SQL , Git , Docker , Postman , Vercel , and Railway.
- **Security:** JWT , Google OAuth , RBAC (Role-Based Access Control) , and Bcrypt.
- **Languages:** Spanish (Native) , English (Fluent - Conversational).
